

# Priva NutriFlex

Smart, flexible and accurate fertilizer dosing

Precise application of water and nutrients is critical for good crop performance. The Priva NutriFlex ensures that crops are provided with the correct fertilizers at every watering. This ensures optimum growth, higher yields, improved colour and flavour, longer shelf life and increased disease resistance. Practical experience has shown that with the use of the Priva NutriFlex, a higher yield per m<sup>2</sup> is reached.

## Why use Priva NutriFlex?

### Safe and reliable

The basic principle is simple. Fertilizer tanks are connected to the Priva NutriFlex. These contain soluble fertilizers dissolved in water. The dissolved fertilizers are injected into the NutriFlex mixing tank, where they are mixed with water and pumped to the crop. The NutriFlex can mix a maximum of eleven solutions simultaneously. The dual EC and pH measurements provide maximum reliability. The entire process can be controlled by the Priva process computer and possibly by other process controllers. The operating system for the NutriFlex is available in a variety of languages.

### Flexible and efficient

The NutriFlex can be used with every type of irrigation system. The acidity can be controlled with acid or lye. This makes the Priva NutriFlex extremely suitable for applications of soilless growth systems. The system is available in a range from 5 up to 125 m<sup>3</sup>/hour. Within these capacities, a number of system pressures are available. The Priva NutriFlex is easy to integrate into existing configurations and provide efficient solutions for any size of business. With deployment of the Priva NutriFlex, an increase of 15% in production can be realized.

### Durable and low maintenance

NutriFlex systems are extremely durable and require very little maintenance. The system is made of stainless steel and sustainable plastics, with minimal moving parts as a result of using venturi dosing.

# Advantages of Priva NutriFlex

- Efficient fertilizer dosing for all types of crops
- Flexible choice in pump and number of dosing channels
- Accurate and reliable
- Long shelf life
- Compact system
- Constructed from durable materials
- Fault tolerance
- Various expansion options

## General specifications

- Dosing in a mixing tank system
- Regular or large mixing tank
- Capacity 5-125 m<sup>3</sup>/hour
- Optional mixing tank reduction for efficient recipe change
- Dual EC and pH measurements for maximum reliability
- 1-11 dosing channels up to 1000 liters/hour
- Optional EC pre-control and measurement
- Optional post-filtration (75, 100 & 130 micron)
- Optional filling pump
- Optional pressure controlled
- CE and CSA/UL certified units

## Main functions

Irrigation functions from the Priva process computer operating program library, such as:

### Measurements

- Total water consumption, EC and pH logging per valve
- Drain quantity and logging
- Volume measurement
- Light or radiation measurement

### Irrigation control

- Fertilizer recipes
- EC pre-control option
- Large number of starting conditions
- Water and fertilizer stock control
- Rinse valves
- Rotation of valves

### Management

- Extensive insight into all measurements, control functions and alarm situations
- Priva Operator for registration and operation
